What is Protection Film?

Composed of a plastic film and adhesive layer – the film provides abrasion resistance, scratch resistance, puncture resistance and conformability as well as environmental resistance, whilst the adhesive layer needs to hold the protective film in place through any environmental conditions then remove easily and cleanly.

Uses

Protection Films are used in many industries to protect products from surface damage and scratches. Plastics, glass and metals all need surface protection against scratches, dust, moisture and other storage and transit damage.

50 Micron

Clear – Medium tack acrylic adhesive which is ideal for flat smooth surfaces,
No.1 choice for plastic (interior grade)

White – Medium tack acrylic adhesive, general purpose grade
